## **Announcement: ACT T-Gauge® Sensor Release**

In early 2011, ACT entered into an exclusive agreement with Picometrix to integrate the T-Gauge® Sensor into our Envision M-Series measurement platform.

The Envision M-Series with the T-Gauge® terahertz sensor is the first web scanning Time Domain Terahertz solution for plant floor deployment. The measurement solution offers a unique multi-layer, non-nucleonic, non-ionizing, non-contacting multi-function sensor that measures basis weight, caliper thickness and percent moisture in one small ultra-fast reflection sensor.

We are pleased to be the first company to deliver a fully functional system, have it installed and signed off by our customer last November. The equipment is operating and exceeds the customer's expectations. We are now in the process of closing orders and delivering these measurement solutions to others.

The cooperative effort between ACT and Picometrix with a proven industry tested solution gives us a credible stance to announce that the Envision M-Series Measurement Platform with the T-Gauge® Sensor is now Generally Available to the Plastics, Rubber, Non-Woven, Coating and Converting Industries.

The Envision M-Series with T-Gauge® solution is the now generation of safe and green technology available to the industry. We urge you to call or go to our web site for more information about this proven solution. ACT is ready and waiting to solve your unique process measurement requirements and look forward to your response.
